

Daniel Olusakin

United Kingdom, London | olusakindaniel03@gmail.com | (+44) 7555388309 | [Linkedin](#) | [GitHub](#)
Portfolio: daniel-olusakin.netlify.app

TECHNICAL SKILLS

Languages: Java, Python, React, JavaScript, TypeScript, Node (Express.js), HTML, CSS, MySQL, PostgreSQL, FileMaker Pro
Tools: Git (GitHub/GitLab), Docker, Maven, AWS S3, JUnit, Jest, VSCode, IntelliJ, Bun, NPM
Relevant Coursework: Data Structures and Algorithms, Database Systems, Software Development, Web Development, Object-Oriented Programming, Cloud Computing, AI & Machine Learning, Concurrency

EDUCATION

University of Kent Canterbury, Kent
Bachelor of Science in Computer Science: Expected 1st (82%) Sept 2023 - July 2026

WORK EXPERIENCE

Systems & Automation Internship Jan 2026 - Present
Art4site Wye, Kent

- Automating production workflow by improving integration of the customer-facing interface with the backend systems.
- Enhancing efficiency, **reducing** manual processes, and **improving** data connectivity between **FileMaker**, **Intercom** and the internal order-management systems.

Peer Tutor (Computer Science) Sept 2024 - Present
University of Kent Canterbury, Kent

- Helped instruct approximately **12** students per session on object-oriented programming concepts in **Python** and **Java**, then supported them in applying theoretical concepts to practical projects.
- Analysis of students' source code to identify and help **debug** issues by providing targeted guidance for improvement.

IEUK Technology Internship Jul 2025 - Jul 2025
Bright Network Virtual

- Worked on projects that simulated real-life work alongside product/project management, and supported by leading financial firms throughout project work to successfully create a deliverable within **24** hours.
- Gained knowledge in **agile methodologies** and how they are put into practice through various workshops.

PROJECTS

Library Management System | *Java, MySQL, Docker, Maven, Book API*

- Comprehensive library management system to efficiently track books, users, and rental transactions, using MySQL.
- JBCrypt** used to secure registration and authentication by salting data passed during registration.
- FlatLaf used to enhance user experience for a modern UI, and functionality tested with **JUnit** for code reliability.

JPMorgan Chase & Co Software Engineering Simulation | *Java, Spring Boot, H2 SQL, Kafka, Incentives API*

- Spring Boot backend developed for a simulated financial system, integrating Apache Kafka for **real-time** transaction processing and H2 database for validated transaction persistence and balance management.
- RESTful **API endpoints** created (including a user balance query) to integrate with an external Incentives API.

Markdown Notetaking Application | *React, JavaScript, TypeScript, Express.js, PostgreSQL, AWS S3, Docker*

- Implemented **secure**, token-based authentication (JWT) and developed a RESTful API for all CRUD operations.
- Integrated AWS S3 for scalable **cloud storage** of file attachments, managed via the backend API.

EXTRACURRICULAR

ICHack 2025 Hackathon | *Python, Flask, React, JavaScript, Express.js, OpenAI API*

- Led a team to build an AI code feedback application in Python, and pitched the project to **JetBrains** representatives.

Google AI Hackathon | *React, JavaScript, TypeScript, Express.js, Gemini API*

- Selected as 1 of 55 candidates from 450+ applicants to develop a web app leveraging **Google Veo** from the **Gemini API**.

EasyA Polkadot Hackathon (Blockchain) | *React, JavaScript, TypeScript, Express.js, Solidity, Ethers API*

- Developed and pitched a **decentralised** chat application with a team that surpassed technical standards, earning **DOT** coin from the prize pool.

AWS Summit 2025

- Visited different booths and gained insights on the usage of various AWS Cloud services, e.g. **AWS Bedrock** and how it would help shape the future of business and technology.
